

EACLive!™

EACLive!™ Remote Learning: Designed for Today's Engineers and Administrators

You, like a growing number of busy professionals, probably value the ability to access information without leaving your desk. EACLive!™ Remote Learning offers students a live learning experience that occurs in real-time through a web browser.

How EACLive!™ Works

1. Students join the class from their home or office. EACLive!™ leverages a broadband connection, web meeting and PC sharing software, and room microphones or speakers to plug a student into the classroom experience.
2. Students are given a unique computer ID associated with a specific workstation in our learning center. The student will connect to this workstation and leverage EAC's software license to complete the course.
3. EACLive!™ is not "online training." This remote learning option let's students hear and see instructor's lectures, see demonstrations, and complete individual lab work – all while staying fully connected with the instructor and classroom using chat windows, room microphones, and speakers.

Benefits

- Eliminate variable travel costs for students or instructors (airfare, hotel, meals, car rental, etc.)
- Reduce time spent away from job and home commitments
- Connect virtual teams for collaborative group training
- Eliminate time spent waiting for a specific course to become available in your area
- Receive the same course materials as in-center students – including a course manual and access to supplemental resources (whitepapers, best practice guides, etc.)

EACLive!™ is making professional education more convenient. We are leveraging technology to expand your access to high quality certified training. Our certified instructors can teach any course from the entire PTC catalog – and we can deliver it at your office, at our training centers, via EACLive!™, or through subscription based eLearning.
