

BoM reports

EAC PRODUCTIVITY APPS FOR WINDCHILL

Why would you need BoM Reports?

This app allows users to see the progress of a Bill of Materials, and applies filters so you can focus on parts that are not yet released. It is also useful for viewing all of the “make” parts or “buy” parts in a given BoM, or all parts created/modified by a particular user.

The export functionality allows users to execute a specific report on a frequent basis and compare the results to previous exports to check progress over time.

The BoM Report App provides users with a visual representation and detailed listing of the current status of an end item or product. This app displays information about each part contained in the Bill of Materials and groups them in a chart for simple viewing.

This EAC Productivity App allows users to quickly assess a Bill of Material and ensures projects stay on-time and on-track. The simplified view helps to ensure products are built with the appropriate design iterations.
