EAC PRODUCTIVITY APPS FOR WINDCHILL

How Can Quick Access Help You?

PLM and PDM tools have complex user interfaces and many relational paths. This can inhibit upstream and downstream user adoption. Quick Access helps improve user adoption of critical PLM and PDM systems.

Quick Access helps organizations improve the return of their Windchill investment by improving user experience and increasing upstream and downstream adoption.

Quick Access was created to provide an improved user experience by streamlining access to critical and select data sets to ultimately enhance productivity for shop floor personnel.

With minimal effort, this EAC Productivity App allows downstream users to feed critical quality information back to the engineering department. The simplified interface and consolidated task workflows help users easily submit new problem reports, new change requests, and new variances.
